# 5 REASONS
## to Bring Your Web Apps to Android with Velocity

Deliver a powerful, productivity-boosting mobile experience for your SAP, Oracle, or other web-based enterprise systems. Velocity is the framework to bring your existing web apps to Android, with all the tools to help workers speed through retail and supply chain tasks.
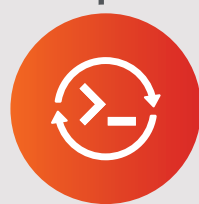

1 CUSTOM KEYBOARDS
Why show a full QWERTY keyboard when a data field will only accept "Yes" or "No"? Simplify workflows and reduce errors by presenting workers with only the keys that make sense for a given field, while maximizing screen real estate for your app.

2 ADVANCED SCANNING
Barcode scanning is core to your tasks and data accuracy. Velocity places into your hands control of device-specific scanning parameters.

3 SCRIPTING & AUTOMATION
Automate multiple key sequences with key macros. Run scripts to eliminate redundant stepsin a workflow. Plus, control device behavior using meta-tags or vendor-specific, post-processing options.

4 ADVANCED APP RENDERING
Your web-based enterprise systems weren't designed for mobile device screens. Inject custom HTML and CSS to improve rendering of apps designed for desktops, so they're optimized for Android device screens no matter the size.

5 VOICE-ENABLED with SPEAKEASY
Add voice to your web apps and watch workers speed through tasks hands-free to perform picking, receiving, and any number of other tasks in your warehouse or on your retail floor.

Already using our Industrial Browser or VelocityCE on your Windows Mobile/CE devices? Excellent! Velocity is designed to help you bring those existing browser apps to Android. The same is true for organizations using our Naurtech CETerm product.
