

Supplier portal

A supplier/vendor portal is a platform that enables businesses to collaborate with third-party suppliers of goods and services. It removes the manual effort required during the procurement process by automating several mundane tasks.

They allow organizations to:

Enable self-service-based collaboration with suppliers

Simplify the onboarding of suppliers

Work with suppliers from across geographies

Access real-time information on order placement, acknowledgement and tracking

A supplier portal is no longer just a facilitator for effective collaboration, it's a **competitive differentiator** for organizations.

Challenges

Despite the multiple supply chain solutions available in the market, businesses still face challenges in using these solutions. Challenges such as:

High licensing and maintenance cost

Lack of modern features like mobility and AI/ML

Lack of flexibility in extending the capability

Why Zoho Creator Supplier Portal

Zoho Creator Supplier Portal is a cloud-based supplier portal built on Zoho Creator, a leading low code platform. Thus it inherits the Zoho Creator platform capabilities of easy extensibility, ability to integrate with all major ERP vendors such as Oracle, SAP, Microsoft, and others. Zoho Creator Supplier Portal can also be used across mobile devices and integrate with IoT devices.

Features

Modern software

On-the-go access across iOS, Android, and mobile browsers
