

How to Select the Right

Voice-enabled

Picking Solution

for Your Warehouse

A COMPLETE CHECKLIST

Choosing the right product to meet your company’s needs can be challenging. Consider these key factors before selecting the right voice-enabled solution:

Easy Integration with all Warehouse Management Systems (WMS)

Be sure your voice technology integrates easily into existing WMS systems with minimum effort and cost.

Cost-effective

Beware! Many vendors won’t bring up the hidden long-term maintenance costs that can total up to \$100,000/year.

Easy and Fast Deployment

Look for vendors who can extend voice to your terminal emulation or web apps and deploy voice on existing mobile computers in less than 30 days.

Simple Employee Training

You need a speaker-independent voice solution that’s proven, ready to be deployed, and can recognize voice without any upfront training time and cost.

Flexibility and Versatility

Ensure that your hands-free voice picking solution works with both telnet and web apps across a spectrum of Windows and Android operating systems.

Multi-modal

Look for a voice solution that allows pickers to switch between voice-directed and on-screen modes, giving them more flexibility.

Speak the Global Language of Productivity

Verify if the voice-enabled app offers features that recognize users’ spoken responses in multiple languages, regardless of accents.

RESULTS

Of all the activities found in a warehouse, **70% of costs** are **attributed to order fulfillment**. It’s time to tap into voice-enabled technology to help you work smarter, faster, and more efficiently.
